

Additional information about my extension for the seventh assignment.

**What I changed:**

- The rectangle with a label of “No Image” is substituted with a template of the user’s profile image (default\_user.jpg), which is the same for all user profiles initially (before they change their images).
- Whenever the user clicks on the Add, Lookup or Delete buttons, whatever fields were written into the west segment of the application will be cleared.
- Whenever the user decides to befriend someone, after clicking the “Add Friend” button, the user is prompted with a dialogue box, which asks the user to indicate the relation that they have with the user they are about to add in their friends’ list. There are several relational categories: parent, child, partner and so on. Also, for instance, if X is Y’s parent, the canvas automatically updates the information that Y is X’s child.

**What I added:**

- Colors for the buttons. For instance, light green color for the “Add” button, red for the “Delete” button and so on.
- Wallpaper image instead of plain white background.
- Hobbies’ category that operates similar to the Status category. The user indicates their hobbies and the canvas displays information in the following manner, e.g.: “[Username]’s hobbies are: [list of hobbies].”.
